Relativistic quantum dynamics of ions & beams

$$\dot{\rho} = \frac{i}{\hbar}[H, \rho] + L\rho$$

Relativistic quantum dynamics:

- Strong Coulomb fields
- Intense laser fields
- Non-linear electron-photon interaction
- Laser-driven electron & ion dynamics

Atomic Structure   Ion-Atom-Collisions   Ions and Atoms in intense Laser Fields

Accurate Atomic Amplitudes (triple-A@Jena)

Strong-field QED & atomic many-body theory	Twisted particle beams; analysis & control of quantum processes	Computational physics & large-scale simulations; computer algebra	Applications in science & technology (Data for astro & nuclear physics, atomic clocks, photonics, plasma & x-ray science)

+++++ Bachelor, Master & PhD topics available +++++
